DETAILED ACTION

Page 2

Claim Rejections - 35 USC § 103

- 1. The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:
 - (a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negatived by the manner in which the invention was made.
- 2. The factual inquiries set forth in *Graham* v. *John Deere Co.*, 383 U.S. 1, 148 USPQ 459 (1966), that are applied for establishing a background for determining obviousness under 35 U.S.C. 103(a) are summarized as follows:
 - 1. Determining the scope and contents of the prior art.
 - 2. Ascertaining the differences between the prior art and the claims at issue.
 - 3. Resolving the level of ordinary skill in the pertinent art.
 - Considering objective evidence present in the application indicating obviousness or nonobviousness.
- 3. Claims 1-6 and 9-11 are rejected under 35 U.S.C. 103(a) as being unpatentable over SMITH (3970834) in view of CASTIGLIA et al.(4573108). Smith shows the invention substantially as claimed except for the use of a low voltage transformer. Castiglia et al. shows that it is known in the art to provide a low voltage transformer in a decorative lighting system such as Smith for the purpose of powering low voltage lights which generate less heat and as such are safer for decorative displays. It would have been obvious to one of ordinary skill in the art at the time of the invention to provide a low voltage transformer for the decorative display of Smith as shown by Castiglia et al. for the purpose and advantage of using light which generate less heat and are safer. Claims 2 and 6 distinguishes over Smith in that a plurality of ornament has conductive

clasps which pierce and electrically connect with the current carrying rods. Castiglia et al. shows that it is old and well known to provide ornaments with resilient current carrying clasps which pierce and electrically connect with the current carrying rods for the purpose of providing detachable electrical ornaments. It would have been obvious to one of ordinary skill in the art at the time of the invention to provide on the current carrying rods of Smith ornaments with resilient current carrying clasps which engage and electrically connect with the current carrying rods as shown by Castiglia et al. for the purpose of providing detachable electrical ornaments. Re claim 3, note the top end of each vertical support has an additional voltage supply contact as shown in Fig.1. Re claim 4, note that the highest vertical support as shown in Fig.1 of Smith has an aperture for an electrical plug. Re claim 5, note that the plurality of pairs if current carrying rods as shown in Fig.1 of Smith are surrounded with insulation. Re claim 9, note Smith's base as shown in Fig.1 is a tree stand. Re claims 10 and 11, note that the vertical supports and current carrying rods of Smith are the tree trunk and branches, respectively of an artificial tree as shown in Fig.1.

Page 3

Allowable Subject Matter

4. Claims 7-8 are objected to as being dependent upon a rejected base claim, but would be allowable if rewritten in independent form including all of the limitations of the base claim and any intervening claims.

Art Unit: 2875

Any inquiry concerning this communication or earlier communications from the examiner should be directed to Stephen F. Husar whose telephone number is 571-272-2371. The examiner can normally be reached on M-W and F from 7:30-4:00.

If attempts to reach the examiner by telephone are unsuccessful, the examiner's supervisor, Sandra O'Shea can be reached on 571-272-2378. The fax phone number for the organization where this application or proceeding is assigned is 703-872-9306.

Information regarding the status of an application may be obtained from the Patent Application Information Retrieval (PAIR) system. Status information for published applications may be obtained from either Private PAIR or Public PAIR. Status information for unpublished applications is available through Private PAIR only. For more information about the PAIR system, see http://pair-direct.uspto.gov. Should you have questions on access to the Private PAIR system, contact the Electronic Business Center (EBC) at 866-217-9197 (toll-free).
